DETAILED ACTION

This action is in response to the submission filed on 9/2/08. Claims 1, 3-11, and 13-20 are presented for examination.

Response to Arguments- 35 USC § 103

1. Applicant's arguments, filed 9/2/08, with respect to claims 1, 3-11, and 13-20 have been fully considered and are persuasive. The rejection of 1, 3-11, and 13-20 has been withdrawn.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1, 3-11 and 13-20 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.
3. Claim 1 recites a method for obtaining an optimal value, comprising calculating extrema and sensitivity values, which is a mathematical algorithm. Mathematical abstracts do not comprise statutory subject matter. In addition, claim 1 is not tied to an additional statutory category. All depending claims are rejected as well.
4. While Claim 11 recites a computer-readable medium, the body of the claim is directed towards "program instructions for..." Because the instructions are not explicitly executed, the claim is being interpreted as a software system comprising software *per se*. All depending claims are rejected as well.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
6. Claim 4 currently depends from cancelled claim 2. Correction is required.

Allowable Subject Matter

7. Wendt and Li teach a method for obtaining an optimal reflectivity value for multilayer stacks, including parameterizing layers and calculating extrema. However, these references and the remaining prior art of record, in combination with the remaining elements and features of the claimed invention, fails to disclose or suggest, “obtaining the optimal reflectivity value for the simulated multilayer stack by calculating a cost function $R + \alpha S$ using the plurality of independent variables at once, wherein α is a weighted parameter for the sensitivity values in the cost function.”
